

# Floor Scales

GSE Floor Scales deliver years of reliable service with legal for trade accuracy.

In today's fast-paced environments, the accuracy and reliability of your scale equipment is essential. GSE offers a wide range of NTEP certified floor scales to accommodate a variety of weighing applications from shipping and receiving to chemical and food processing.

A critical element in ensuring accuracy in a floor scale is to minimize the effect of deck deflection under load. GSE Floor Scales are specifically designed and tested to minimize deck deflection and to survive heavy concentrated loading generated from cylinders, vessels and wheeled vehicles such as pallet jacks and lift-trucks.

## Gator Deck™ Heavy Duty Floor Scale

The Gator Deck™ Floor Scale is ideal for general-purpose, heavy industrial weighing applications. The design incorporates a formed steel channel structure engineered to provide years of reliable service.

### Features

- NTEP certified legal for trade.
- Tangential Load Cell Orientation (TLO) minimizes load cell deformation under extreme loading conditions by creating a rotary movement in the platform. This rotary movement reduces load cell stress, increases accuracy and improves the performance of your scale.
- Heavy Duty 0.25" thick diamond tread deck-plate and formed steel channels provides structural integrity under concentrated loads.
- Supports 100% full scale capacity end loading for drive-on applications.

Gator Deck™ with optional smooth deck and top leveling adjustment

Gator Deck™ with 2 access ramps

See 'SPECIFICATIONS' for Options, Applications, and Additional information.
